

Certified Agile Scrum Master

Modality: Virtual Classroom

Duration: 3 Days

About this course:

DevOps University's Agile Scrum Master certification training is a blend of both knowledge and skills of Scrum practices including the Agile Framework.

Agile Scrum Certified professionals earn up-to **\$90,000** per year in today's market.

Course Objective:

Our 3-day course will set you up in becoming a Certified Agile Scrum Master. During the course, attendees get the opportunity for exam prep and make use of the detailed practice being taught in the course. This course is a hands-on workshop where you will be asked to submit assignments and will help evaluate better. The key topics covered in this course are:

- Scrum Master role and responsibilities
- Agile estimation, monitoring and control
- Adaptation to Agile Model
- Preparation for examination
- Managing complex projects based on Agile methodology

Audience:

DevOps University's Agile Scrum Master certification is best suited for candidates working in the following professional areas:

- Business Management
- IT Service Management
- Software Development
- Project Management

Professionals operating within project management positions with responsibilities ranging from working within a project team or conducting project-related functions across organizations.

Prerequisite:

There are absolutely no prerequisites for taking the Scrum Master exam but candidates are required to present their marked assignments completed during the course in order to achieve the Master certification.

Course Outline:

- **Module 1: Course Overview and Introduction**
- **Module 2: The Agile Way of Thinking**
- **Module 3: The Scrum Master Role**
